## **Academic Project:**

**Name:** Sensing of EOG signal to control Human Machine Interface(HMI)

**Duration:** 5 months

**Team Size:** 4

### **Description:**

The main objective of the project is control the robot by sensing the eye ball movements and pump the water in order to stop the fire by sensing the temperature. The project has two parts. One is transmitter(Eye Goggle) and the other one is receiver(Robot). In Eye Goggle we inserted two IR sensors so that it sense the eye ball movements and the resulting signal will be called as EOG signal. This signal will be sent to the receiver through Transmitting antenna.

The signal coming from the transmitting antenna will be received by the receiving antenna. The analog signal will be converted into digital by using DTMF encoder and sent to the microcontroller(AT89S52). With the help of Embedded C language program will be written and dumped through microcontroller. After that DTMF decoder will convert the digital signal into the analog signal and the signal will be given to two DC motors. DC motors will run and the robot will move(Left, Right, Forward). Here one Thermistor is also fixed in the robot. It will sense the temperature beyond 40 degree celcius and the signal will be sent to the water pump. Water pump will pump the water in order to stop the fire.

## **Application:**

- Can be used in military applications(fire issues).
- Used as fire fighting robot.
- With little modification can be used for medical purposes.
